

“SEPTI-SAVER”

Liquid micro-organisms that digest organic and petroleum based substances in septic tanks, holding tanks, sumps and anywhere organic and petroleum waste is held. Septi-Saver immediately starts to digest waste on contact. Within 20 minutes Septi-Saver starts to reproduce becoming a very economical way to keep tanks and plumbing lines clean as well as greatly reducing odours.

Applications: Septic tanks, holding tanks, sumps, tile fields, outhouses and anywhere organic and petroleum waste is encountered.

Directions / Dilutions: The amount of waste entering the system and the size of the holding tank will dictate how much Septi-Saver is required. For general use shock treat the system with an initial dose of 1 litre. Treat the system with 200 ml each day for the first 2 weeks. To maintain, treat once a week with 1 litre.

Laboratory Analysis:

Appearance:	Green liquid
Odour:	Neutral scent
Corrosion:	Non corrosive
Solubility:	Water soluble
Toxicity:	Non toxic

Packaging: 205 litre drums
20 litre pails
4 x 4 litre containers

For further information consult the material safety data sheet and label.
